= 1929, =

Parte I. — OSSERVAZIONI

ROMA
PROVVEDITORATO GENERALE DELLO STATO
LIBRERIA
1930 - ANNO VIII.

PREFAZIONE

Il presente volume contiene gli elementi di osservazione raccolti nell'anno 1929 dalla Sezione di Parma dell'Ufficio Idrografico del Po e riferentisi al corso principale del fiume ed ai bacini del versante appenninico a valle dello sbocco del Tanaro.

Altri due separati volumi raccolgono gli analoghi elementi distintamente per il versante alpino a sinistra della Sesia (Sezione distaccata di Milano) e per quello alpino ed appenninico a monte dello sbocco della Scrivia (Sezione distaccata di Torino).

Di norma, ogni elaborazione degli elementi raccolti è esclusa dal presente volume, e verrà compresa nel corrispondente volume della Parte II. degli Annali; qui si sono solamente indicate alcune prime e più elementari elaborazioni (medie, scostamenti dalla normale, ecc.) che servono a rendere possibile la immediata utilizzazione dei dati di osservazione anche prima che venga pubblicata la Parte II. che necessità di studio costringono a ritardare.

Pochissime modificazioni vennero introdotte nel volume, rispetto a quelli precedenti; alcune si sono rese necessarie per ottenere una maggiore uniformità con le corrispondenti pubblicazioni delle Sezioni Autonome Idrografiche; altre furono introdotte per rendere più comoda la utilizzazione dei dati esposti; in ogni caso si curò di mantenere la maggiore omogeneità coi volumi relativi alle annate precedenti.

Si inizia nel presente volume la pubblicazione dei rilievi idrografici che si effettuano nel delta padano, ove la rete di stazioni di osservazione e di misura stabilita per lo studio del regime fluviale nei suoi rapporti con quello del mare è ora in completa efficienza.

PARMA, Aprile 1930 - VIII.

 3 Novembre — H - 8,08 — Portata - mc/sec. 8738
 4 Novembre — H - 7,71 — Portata - mc/sec. 7970

MISURE DI PORTATA (pag. 432)

Anno 1927

Anno 1926

Fiume Po - Stazione di Piacenza - Torbida giornaliera in tonnellate

a) METEOROLOGIA

SEGNII CONVENZIONALI.

- * Mancano le osservazioni.
- [] Dato interpolato.
- ? Dato incerto.

ANNOTAZIONI.

$$\frac{t^8 + t^{\max} + t^{\min} + t^{24}}{4}$$

Le temperature medie sono calcolate con la formula:
e sono stampati rispettivamente in grassetto e in corsivo il valore massimo e minimo della temperatura media giornaliera nel mese.
La velocità del vento è indicata in gradi secondo la scala:

0 - Calma	-	Velocità oraria.		Km.	0-7
1 - Débole	-	>		>	7-14
2 - Moderato	-	>		>	14-29
3 - Quasi forte	-	>		>	29-36
4 - Forte	-	>		>	36-50
5 - Tempesta	-	>		>	50-83
6 - Uragano	-	>		>	83-108

Le osservazioni pluviometriche, espresse in millimetri, sono effettuate alle ore 9 del mattino e assegnate al giorno stesso. Esse comprendono pioggia e neve fusa. — Le quantità di pioggia seguate in grassetto sono le massime giornaliere.
Nella colonna « strato di neve » viene segnata l'altezza dello strato nevoso sul suolo alla fine del mese.
Sono indicati come giorni piovosi quelli nei quali la precipitazione è stata uguale o superiore ad un millimetro.
