

b) POTAMOLOGIA

SEGN I CONVENZIONALI.

- » Mancano le osservazioni.
- [] Dato interpolato.
- ? Dato incerto.

ANNO TAZIONI.

I valori di piena e di magra ordinaria sono calcolati, per ciascuna serie idrometrica, dalla data di inizio delle osservazioni a tutto l'anno 1930, basandosi sul criterio di frequenza, ed ammettendo come ordinarietà dell'evento la frequenza del 75 per cento.

Le osservazioni idrometriche e quelle di torbida e temperatura delle acque sono effettuate alle ore 12 o ricavate per quell'ora dai diagrammi degli idrometrografi.

Il segno ** indica la massima altezza idrometrica.

id. * id. minima id. id.

Le temperature diurne dell'aria sono date come media delle temperature massima e minima del giorno.

Le medie di riferimento indicate come aventi per origine l'anno 1901 sono tali per le osservazioni idrometriche iniziate in quell'anno o anteriormente: in tutti gli altri casi si riferiscono al periodo che ha origine con l'anno indicato nella testata per l'inizio delle osservazioni.

Le altezze idrometriche interpolate in carattere minuto, fra quelle giornaliere, rappresentano le altezze di colmo verificatesi da un mezzogiorno all'altro.

L'Ufficio (Sezione di Parma) raccoglie e conserva anche i dati inerenti agli idrometri di cui all'elenco riportato nella pagina seguente:

(*) Le altezze idrometriche sino a tutto Aprile sono rilevate all'apparecchio registratore di Borgoforte avente lo zero alla quota di m. 14.60 e dal Maggio in poi all'idrometro vero di Roncorrente.
(**) L'idrometro di Rovere sostituisce quello di Ostiglia, ora abbandonato, senza sensibili variazioni trovandosi sull'opposta sponda quasi nella stessa Sezione e con quota dello zero di pochi centimetri inferiore.

(*) Massima piena assoluta 6.09 il 27 ottobre 1839 — (**) Massima piena assoluta 5.80 il 17 ottobre 1839 — (***) Quota dal marzo 1926: la quota antecedente era 202.70. — I valori caratteristici e le medie sono riferiti alla nuova quota

[illegible]

(*) Massima piena assoluta 6.74 (Ottobre 1857). — (1) Le osservazioni si iniziano col mese di Maggio.

(*) Le altezze idrometriche sino a tutto Aprile sono rilevate all'apparecchio registratore di Borgoforte avente lo zero alla quota di m. 14.56 e dal Maggio in poi all'idrometro vero di Ronco Corrente.
 (**) L'idrometro di Rovere sostituisce quello di Ostiglia, ora abbandonato, senza sensibili variazioni trovandosi sull'opposta sponda quasi nella stessa Sezione e con quota dello zero di pochi centimetri inferiore.

(*) Massima piena assoluta 6.09 il 17 ottobre 1839 — (**) Massima piena assoluta 5.80 il 17 ottobre 1839 — (***) Quota dal marzo 1926: la quota antecedente era 202.70. — I valori caratteristici e le medie sono riferiti alla nuova quota. Le portate sono dedotte da altro idrometro posto di recente in esatta corrispondenza della stazione di misura. — Le altezze idrometriche sono invece sempre quelle del vecchio idrometro, meno regolari per effetto di variazioni in corso nell'alveo.

(*) Le altezze idrometriche sino a tutto Aprile sono rilevate all'apparecchio registratore di Borgoforte avente lo zero alla quota di m. 14.60 e dal Maggio in poi all'idrometro vero di Rocconcorrente.
 (**) L'idrometro di Revere sostituisce quello di Ostiglia, ora abbandonato, senza sensibili variazioni trovandosi sull'opposta sponda quasi nella stessa Sezione e con quota dello zero di pochi centimetri inferiore.

Osservazioni e rilievi in sezioni tipiche degli affluenti di destra

(*) Nuova determinazione.

Osservazioni e rilievi in sezioni tipiche degli affluenti di destra

Luglio 1931

[illegible]

1) Portata quasi nulla. Le variazioni di livello dipendono da attingimenti per uso irriguo e apporto vena freatica.

(*) Le altezze idrometriche sino a tutto Aprile sono rilevate all'apparecchio registratore di Borgoforte avente lo zero alla quota di m. 14.60 e dal Maggio in poi all'idrometro vero di Rancocorrente.
(**) L'idrometro di Revere sostituisce quello di Ostiglia, ora abbandonato, senza sensibili variazioni trovandosi sull'opposta sponda quasi nella stessa Sezione e con quota dello zero di pochi centimetri inferiore.

(*) Massima piena assoluta 6.09 il 17 ottobre 1839 — (**) Massima piena assoluta 5.60 il 17 ottobre 1839 — (***) Quota dal marzo 1926: la quota antecedente era 202.70. — I valori caratteristici e le medie sono riferiti alla nuova quota.
(1) Le portate sono dedotte da altro idrometro posto di recente in esatta corrispondenza della stazione di misura. — Le altezze idrometriche sono invece sempre quelle del vecchio idrometro, meno regolari per effetto di variazioni in corso nell'alveo.

Osservazioni e rilievi in sezioni tipiche del Po

Dicembre 1931

Corso d'acqua										P o									
Deambulazione della stazione idrografica										Revere									
Osservazioni e rilievi										Borghetto									
Quota dello zero sul mare										Torbidità									
Bacino di dominio Km. g.										Media giornaliera									
Massima piena										Torbidità specifica									
Piena ordinaria										Acqua in centigr. (Mantova)									
Magra ordinaria										Acqua in centigr. (Ferrara)									
Anno dell'inizio delle osservazioni										Idrometro									
Media decadica										Portata									
Media mensile										Media giornaliera									
Media Dicembre 1901-1931										Torbidità									
Scostamento dalla media										Acqua in centigr. (Mantova)									
Massima										Acqua in centigr. (Ferrara)									
Minima										Idrometro									
Escursione										Portata									

(*) Le altere idrometriche sino a tutto Aprile sono rilevate all'apparecchio registratore di Borgoforte avente la quota di m. 14.60 e dal Maggio in poi all'idrometro vero di Ronconrante.
 (**) L'idrometro di Revere sostituisce quello di Ostiglia, ora abbandonato, senza sensibili variazioni trovate: sull'opposta sponda quasi nella stessa Sezione e con quota dello zero di pochi centimetri inferiore.

OSSERVAZIONI E RILIEVI NEL DELTA PADANO

IDROMETRIA. — Gli elementi di osservazione sono dedotti dai diagrammi degli idrometrografi col criterio di indicare i vertici di alta e bassa marea quando questa si manifesta in modo sensibile, e negli altri casi i punti caratteristici del diagramma.
Le altezze sono riferite per ogni stazione allo zero idrometrico, la cui quota sul livello medio del mare è indicata sotto il nome della stazione.
I tempi sono segnati per ore intere e mezz'ore.

Altezze idrometriche giornaliere

c) GEOIDROLOGIA

SEGNi CONVENZIONALI.

- » Mancano le osservazioni.
- [] Dato interpolato.
- ? Dato incerto.

ANNOIAZIONI.

Le osservazioni ai pozzi vengono eseguite nove volte al mese nei giorni 2, 5, 8, 12, 15, 18, 22, 25, 28 ed al mattino prima che vengano effettuati forti attingimenti d'acqua.

I valori delle altezze del livello freatico riportati nelle Tabelle che seguono sono riferiti al livello medio del mare.

GENNAIO 1931
