TABELLA 11. – Precipitazioni di massima intensità . . . . . „ 343

TABELLA 12. – Precipitazioni di notevole intensità e breve durata . . . . . „ 345

TABELLA 13. – Giorni consecutivi con precipitazione nulla o molto bassa . . . . . „ 346

TABELLA 14. – Strato nevoso - Precipitazione ed altezza sul suolo - Valori mensili . . . . . „ 348

TABELLA 15. – Strato nevoso - Durata di permanenza sul suolo . . . . . „ 355

TABELLA 16. – Elenco delle stazioni termometriche in funzione di cui non si pubblicano i dati . . . . . „ 364

Carta orografica e carte delle piogge.

PREFAZIONE

Il presente volume comprende gli elementi delle osservazioni meteorologiche raccolte in tutto il territorio del bacino idrografico del Po per l'anno 1936, e le relative elaborazioni.

Al termine del volume si trovano, come di consueto, le carte delle piogge, stagionali ed annuale.

L'adozione di nuovi caratteri tipografici ha reso possibile di riunire in un solo volume i dati che in precedenza venivano divisi in tre volumi, rispettivamente dedicati alle regioni: lombarda, piemontese, ed emiliana; tale riunione renderà più agevole la ricerca degli elementi che interessano di volta in volta e permetterà nel tempo stesso di avere una visione più unitaria dei fenomeni meteorologici nel bacino idrografico del Po.

Come sempre, i dati relativi alle stazioni del bacino del Po situate nel territorio Svizzero sono stati comunicati dall'Ufficio Centrale di meteorologia di Zurigo e dal Servizio Federale delle acque di Berna.

Parma, Dicembre 1937 - XVI.

L'Ingegnere Capo del Genio Civile
Direttore dell'Ufficio Idrografico del Po
MARCO VISENTINI

SEGNI CONVENZIONALI ED ABBREVIAZIONI

Termometro	Tm	Pluviometro totalizzatore	Pt
Termografo	Tr	Dato incerto	?
Pluviometro comune	P	Dato mancante	* *
Pluvionivometro	Pn	Dato interpolato	[ ]
Pluviografo	Pr	Dato nullo	—

I numeri scritti in **grassetto** ed in *corsivo* sottolineato corrispondono rispettivamente ai valori massimo e minimo verificatisi in un determinato periodo.

In tutte le tabelle del presente volume le stazioni sono raggruppate per bacini principali, e nelle tabelle 7, 8 e 9 per bacini secondari; in ciascun bacino le stazioni si seguono secondo l'ordine di sbocco da monte a valle degli affluenti, e per ciascuno di essi in ordine d'altezza sul livello del mare.

CONTENUTO DELLE TABELLE

Tabella 1. - Riporta, per alcune località principali della regione fornite di osservatorio, la **pressione atmosferica media giornaliera** ridotta allo 0°, espressa in millimetri.

Tabella 2. - Riporta, per le medesime località, la **direzione e velocità media giornaliera del vento,** indicata quest'ultima in gradi secondo la scala seguente:

0 = Calma	velocità oraria Km.		0 —	7
1 = Debole	„	„	7 —	14
2 = Moderato	„	„	14 —	29
3 = Quasi forte	„	„	29 —	36
4 = Forte	„	„	36 —	50
5 = Tempesta	„	„	50 —	83
6 = Uragano	„	„	83	ed oltre

Tabella 3. - Riporta, per le medesime località, lo **stato del cielo** risultante dalle osservazioni giornaliere, con le seguenti denominazioni: sereno; 1/4, 1/2, 3/4 coperto; coperto.

Tabella 4. - Riporta, per le medesime località, la **temperatura media giornaliera** calcolata col diagramma termografico oppure nel modo seguente:

$$T_{media} = \frac{T^{mass.} + T^{min.} + T^{h.\ 8} + T^{h.\ 19}}{4}$$

(1) Indicate nella tabella come temperature medie.

Tabella 5. - Riporta per le medesime località:

a) le medie mensili ed annue delle massime e delle minime temperature osservate giornalmente, e le medie mensili ed annue delle temperature medie giornaliere (1);

b) le temperature estreme (massima e minima) osservate in ogni mese e nell'anno, ed il giorno nel quale esse si sono verificate;

c) i seguenti valori della escursione di temperatura: massima e media giornaliera per ogni mese e per l'anno; massima mensile ed annuale (differenza fra le temperature estreme del periodo);

d) la frequenza in giorni per i singoli mesi e per l'anno, delle temperature medie giornaliere, dividendo il campo di escursione della temperatura in sei intervalli.

Tabella 6. - Riporta le **temperature massima e minima giornaliere** relative ad alcune stazioni tipiche (vedi tab. 16) per i vari bacini idrografici, fornite di termometro a massima e minima. Le osservazioni vengono effettuate alle ore 8 antimeridiane. Il valore letto per la temperatura massima viene assegnato al giorno precedente; quello della temperatura minima viene invece assegnato al giorno stesso della osservazione. Nell'ultima riga è indicata la temperatura media del mese.

Le temperature sono espresse in centigradi e corrispondono sempre alle letture effettivamente eseguite, senza alcuna correzione.

Tabella 7. - Comprende per tutte le stazioni pluviometriche del bacino: l'altezza sul livello del mare, il tipo dell'apparecchio; i valori delle **precipitazioni giornaliere,**

decadiche e mensili ed inoltre il numero dei giorni piovosi nel mese, considerando come tali quelli nei quali è stata misurata un'altezza di precipitazione non inferiore ad un millimetro.

Nelle stazioni fornite di apparecchi con misura diretta (pluviometri e pluvionivometri) le osservazioni vengono eseguite ogni giorno generalmente alle ore 8, ed il risultato viene attribuito al giorno stesso; il numero segnato rappresenta quindi la quantità di precipitazione caduta nelle 24 ore che hanno preceduto la misura. Analogamente, per le stazioni fornite di pluviografo, o nelle quali si fanno più osservazioni giornaliere, si riporta per ogni giorno la quantità di pioggia che risulta caduta nelle 24 ore precedenti le ore 8 del giorno a cui è assegnata la precipitazione.

Sono comprese in questa tabella (con i valori mensili) anche quelle stazioni munite di pluviometro totalizzatore nelle quali si effettua regolarmente la lettura alla fine di ciascun mese.

Le quantità di precipitazione sono espresse in millimetri di altezza d'acqua, e comprendono pioggia e neve fusa.

Tabella 8 - Comprende le stazioni munite di pluviometro totalizzatore, per le quali le letture non possono essere eseguite regolarmente alla fine di ciascun mese, e riporta per ciascuna stazione, la data delle letture effettuate, i valori delle precipitazioni risultanti negli intervalli fra le successive letture, ed infine il totale dell'intero periodo. Le quantità di precipitazione sono espresse in millimetri di altezza d'acqua e comprendono pioggia e neve fusa.

Tabella 9. - Riporta, per tutte le stazioni pluviometriche della tab. 7: i **totali mensili, stagionali ed annui** delle precipitazioni e del numero dei giorni piovosi; il valore medio annuo della altezza di precipitazione, per un periodo di anni precedenti di funzionamento di cui è dato il numero, con un minimo di anni 5, ed escluso l'eventuale periodo anteriore al 1915; lo scostamento fra questo valore medio ed il totale misurato nell'anno.

Il valore stagionale dell'inverno è formato coi valori del mese di dicembre dell'anno precedente e dei primi due mesi dell'anno.

Tabella 10. - Riporta per alcune stazioni, la **ripartizione dei giorni piovosi in relazione alle entità delle precipitazioni misurate,** divise in sei gruppi. È inoltre indicato nella prima colonna il numero dei giorni con precipitazione inferiore ad un millimetro.

Tabella 11. - Riporta, per alcune stazioni tipiche, le **precipitazioni di massima intensità,** ossia i dati relativi ai più elevati valori registrati nell'anno in ciascuna stazione per le precipitazioni di 1, 3, 6, 12, 24 ore consecutive.

Tabella 12. - Riporta la data, la durata ed il valore delle **precipitazioni di notevole intensità** (non inferiore in ragguaglio a 60 mm. orari) e **di breve durata** (non superiore ad un'ora) registrate da alcune stazioni tipiche fornite di pluviografo.

La tabella fornisce inoltre per ciascun caso la intensità media di precipitazione ragguagliata al periodo di un'ora.

Tabella 13. - Riporta per alcune stazioni tipiche, l'indicazione e la durata in giorni dei tre periodi di tempo più lunghi nei quali non sono state misurate precipitazioni, e le durate delle due coppie di periodi più lunghi nei quali le precipitazioni complessive non hanno superato complessivamente mm. 15 e mm. 45.

Sono considerati solo e tutti i periodi il cui inizio cade entro l'anno.

Tabella 14. - Riporta, per determinate stazioni, e per ciascuno dei mesi da gennaio a giugno e da settembre a dicembre, nei quali possono verificarsi precipitazioni nevose: le altezze in centimetri dello strato nevoso sul suolo nell'ultimo giorno delle tre decadi mensili; il numero dei giorni nei quali si sono verificate precipitazioni nevose; il numero complessivo dei giorni di permanenza della neve sul suolo.

Tabella 15. - Riporta, per le medesime stazioni della precedente tabella, i **periodi continui di permanenza della neve sul suolo,** indicando per ciascuno: le date dell'inizio e del termine, la durata in giorni, l'altezza massima dello strato nevoso espressa in centimetri ed il giorno in cui si è verificata, infine l'altezza media nel periodo.

Sono contrasegnati con un asterisco (*) i periodi che si sono iniziati nell'anno precedente o che proseguono in quello seguente.

Tabella 16. - Comprende **l'elenco delle stazioni termometriche** che hanno funzionato durante l'anno, e di cui non vengono pubblicati i dati.
